OLD STYLE FASHION

The history of American car racing is rich with colorful characters and equally colorful cars. One of the most notable types of 20th century racing cars is hot rods. The fast, elegant cars captivated our hearts, and we couldn't resist. We created our wooden hot rod model so that all lovers of old vehicles could add this beauty to their collection!

Origins

The origin of the term is not clear... The most likely story is that the name "hot rod" came from roadsters — two-seater cars with removable roofs and powerful engines. The term became popular around the 1930s and 1940s.

Particular Culture

A hot rod is not just a race car. It is an actual ideology of freedom, speed, and style. Fast on straight distances and extremely clumsy on corners, the hot rod became the epitome of rock and roll in its time.

Desert Racing

Hot rods show themselves best on straight distances. With the rise of the hot rod, came a particular culture of races—on the bottom of dried-up lakes. Not far from Los Angeles, the Mojave Desert became the destination for hot rod racing fans wanting to set new records.
